

Operation manual for Card Reader

1. Connect the recorder to the PC. The PC recognizes a removable media. Copy the contents of the removable media onto a separate folder on your PC. From this folder you will run RecManager to operate Reader xD.
2. Disconnect the recorder off the PC.
3. Unzip the folder **RMUsbDrv**, which is in the recorder's memory. If your PC supports USB2.0 driver, remove it using the **RemoveOlddrivers.exe** program located in the folder **RMUsbDrv**. Connect xD Reader to the PC, then it will prompt the New Software Wizard window to install the driver from the folder **RMUsbDrv**.

Remove the XDm card from the recorder, install it in the Reader xD, and connect it to your PC. Red LED should turn on the reader.

4. Start **RecManager** from the PC and in the menu "Connect" select "**AdapterUSB2.0**". Green LED will be flashing on the reader and voice records appear in the left window of the RecManager.
5. Further operation is performed as usual.
